

# Rodolfo Eliezer Soares Rezende

Senior Full-Stack Developer (7+ years of experience) specializing in Java Spring Boot, NodeJs, ReactJS, Angular, and Microservices architecture. Proven ability to increase system efficiency and deliver scalable solutions utilizing Kubernetes, Docker, and Kafka. Seeking a challenging role to leverage technical expertise in a growth-focused environment.

## EXPERIENCE

### Insi — Full-Stack Engineer

06/05/2026 - Working now

Java 17–21 | React | Microservices | Oracle DB | OpenShift | Datadog

Engineered low-latency microservices with Java 17–21 and React, targeting high-throughput performance and memory efficiency.

- **Latency Reduction:** Cut file download execution time by 80% (5 min to <1 min) by refactoring legacy algorithms and DB queries from  $O(n^3)$  to  $O(n)$  time complexity.
- **Memory Optimization:** Reduced memory consumption by 96% (1.5 GB to 50 MB) by optimizing algorithm space complexity, leveraging Java Streams, and tuning network buffers for data streaming.
- **DB & Frontend Performance:** Optimized Oracle DB queries and frontend assets to accelerate page load times and lower database resource utilization.

### Act Digital — Full-Stack Engineer

06/10/2024 - 13/01/2026

**Front-End Engineering:** Designed and implemented responsive, functional user interfaces using Angular (v17/18) TypeScript. Leveraged modern features such as Signals for reactive state management, Standalone Components to reduce boilerplate, and Control Flow Syntax to optimize front-end performance and user experience.

**Automated Testing & TDD:** Drove solution quality and stability by applying Test-Driven Development (TDD) and implementing comprehensive automated tests, including Unit, Integration, and Performance Tests.

**Service Virtualization:** Optimized development and integration workflows by utilizing endpoint virtualization to effectively simulate external dependencies, allowing for faster, controlled testing environments.  
**Backend Development & Architecture:** Led the development of highly scalable and efficient microservices and RESTful APIs using Java with Spring Boot, integrating various systems and contributing to core architectural design.

**Asynchronous Communication:** Implemented and managed reliable, high-throughput asynchronous communication between microservices using Apache Kafka, ensuring system responsiveness and fault tolerance.  
**Front-End Engineering:** Designed and implemented responsive, functional

user interfaces using Angular and JavaScript/TypeScript, prioritizing positive user experience and front-end performance.

**Database Management:** Designed and optimized data models, querying, and performance across both relational (SQL Server, PostgreSQL) and NoSQL (MongoDB) database environments.

## **NTT Data — Full-Stack Engineer**

07/16/2022 - 06/10/2024

**Front-End Development:** Contributed significantly to a major CMS platform using React.js by developing and integrating new user-facing features, leveraging Optimizely toggles for application feature control.

**Full-Stack Support:** Maintained and enhanced application services utilizing Java Spring frameworks, integrating with both MongoDB (NoSQL) and PostgreSQL databases.

**DevOps & Infrastructure:** Employed Cloud Formation to manage infrastructure-as-code, specifically generating metrics on server usage, and utilized Docker, Kubernetes, and ArgoCD for containerization and Continuous Deployment (CD) workflows.

## **Vetta — Full-Stack Engineer**

09/19/2021 - 07/15/2022

**Full-Stack Application Development:** Developed full-stack industrial applications, using Node.js on backend services and React.js for highly interactive front-end interfaces.

**Platform Architecture:** Actively contributed to the design and implementation of the Unified Single Sign-On (SSO) system.

**Database Management:** Managed data persistence for core applications, ensuring data integrity and optimizing performance within PostgreSQL environments.

**Global Collaboration:** Maintained constant synchronization by meeting daily with the Global team (part of the SMS Group ecosystem) to align on technical roadmaps, integration points, and overall project objectives.

## **Actio Brasil — Full-Stack Engineer**

09/23/2020 to 09/19/2021

**Risk Management Module Leadership:** Led the full-stack development and implementation of the critical Risk Management component being the sole programmer. There we use C# (.NET) for backend business logic and React.js for the front-end interface.

**Agile Development & Mentorship:** Built the Risk Management module while receiving constant agile mentorship.

**Front-End Development:** Contributed significantly to a major CMS

platform using **React.js** by developing and integrating new user-facing features, leveraging Optimizely toggles for application feature control.

**General Full-Stack Support:** Maintained and enhanced application services utilizing **ASP.NET** framework, integrating with both **MongoDB** (NoSQL) and **SQL Server** databases.

## **Contabilidade Bessa — Full-Stack Engineer**

06/20/2019 to 09/20/2020

**Internal Full-Stack Development:** Developed and maintained the internal company software, leveraging Node.js for secure and efficient backend services and React.js for the responsive client-side interface.

**Database Management:** Refined and optimized database abilities by working extensively with both relational SQL Server and NoSQL MongoDB environments.

**Cloud Migration Leadership:** Helped with the migration of the company's internal software infrastructure from an on-site server model to a cloud-based architecture. This significantly improved system resilience and scalability.

**Containerization & Orchestration:** Gained foundational expertise in container technology by implementing **Docker** and **Kubernetes** to orchestrate and manage containerized applications, forming the basis of the new cloud deployment.

**CI/CD Implementation:** Utilized **Jenkins** to manage initial Continuous Integration/Continuous Delivery (CI/CD) pipelines, streamlining the deployment process within the new cloud environment.

## **DTI sistemas — Full-Stack Engineer**

20/06/2018 à 01/04/2019.

Developed application for the web using APS.NET. Also worked with Android Studio, applying changes to an existing app.

## **BACHELOR**

### **Puc Minas - Information System**

## **PROJETOS**

**GuelDIM - App para controle financeiro pessoal**
